Sic 9010	C792

Previous experience has shown that in the vast majority of cases these products can be interchanged without any significant effect on the performance of the finished article. However formulations used by Loctite, Araldite, Omnifit, Bondmaster and Permabond are not identical and differences may be observed under some circumstances.

It is Homersham's policy therefore to recommend that end users carry out appropriate trials to ensure the products suitability, particularly if severe environments are likely to be experienced in service.
